

Full Predicted DDCET Paper

SECTION 1: Basics of Science and Engineering

1. A micrometer screw gauge has a pitch of 0.5 mm and 50 divisions on its circular scale. What is the precise least count of this measurement instrument?
(A) 0.1 mm
(B) 0.01 mm
(C) 0.05 mm
(D) 0.001 mm
2. In the calculation of the volume of a sphere, if the relative error in measuring its radius is 2%, the maximum percentage error propagated in its volume is:
(A) 2%
(B) 4%
(C) 6%
(D) 8%
3. The physical quantity that shares the exact same dimensional formula as the impulse of a force is:
(A) Kinetic Energy
(B) Acceleration
(C) Angular Momentum
(D) Linear Momentum
4. Convert a force magnitude of 25 Newtons strictly into the CGS unit system.
(A) 2.5×10^4 dynes
(B) 2.5×10^5 dynes
(C) 2.5×10^6 dynes
(D) 25×10^6 dynes
5. Which of the following represents a fundamental (base) unit in the International System of Units (SI)?
(A) Newton
(B) Ampere
(C) Coulomb
(D) Joule
6. The number of significant figures correctly identified in the measurement 0.004050 kg is:
(A) 3
(B) 4
(C) 6
(D) 7
7. A constant external force is applied to a body of mass 10 kg, increasing its velocity from 5 m/s to 25 m/s in 4 seconds. The magnitude of this force is:
(A) 25 N

- (B) 50 N
 - (C) 100 N
 - (D) 200 N
8. When a particle executes uniform circular motion, the work done by the centripetal force over half a revolution is:
- (A) Maximum and positive
 - (B) Equal to the change in kinetic energy
 - (C) Zero
 - (D) Maximum and negative
9. A rotating wheel completes 300 revolutions per minute (rpm). Its angular velocity in radians per second is:
- (A) 5π
 - (B) 10π
 - (C) 30π
 - (D) 150π
10. According to the conservation of linear momentum, if the momentum of a body is increased by 100%, its kinetic energy will increase by:
- (A) 100%
 - (B) 200%
 - (C) 300%
 - (D) 400%
11. Newton's Third Law of Motion establishes that action and reaction forces:
- (A) Act on the same body to produce equilibrium
 - (B) Act on different bodies and cannot cancel each other
 - (C) Have varying magnitudes depending on the mass of the objects
 - (D) Act sequentially, with action preceding reaction
12. The equation linking mechanical power (P), applied force (F), and constant velocity (v) is:
- (A) $P = F \cdot v$
 - (B) $P = F/v$
 - (C) $P = F \cdot v^2$
 - (D) $P = v/F$
13. According to Coulomb's Inverse Square Law, if the distance between two point charges is doubled, the electrostatic force between them becomes:
- (A) Half of its original value
 - (B) Double its original value
 - (C) One-fourth of its original value

- (D) Four times its original value
14. The SI unit of electric flux is mathematically represented as:
- (A) $\text{N} \cdot \text{m}^2 / \text{C}$
 - (B) $\text{V} \cdot \text{m}$
 - (C) Both (A) and (B)
 - (D) N/C
15. Three capacitors, $C_1 = 3\mu\text{F}$, $C_2 = 6\mu\text{F}$, and $C_3 = 2\mu\text{F}$, are connected in series. The equivalent capacitance of the system is:
- (A) $11\mu\text{F}$
 - (B) $1\mu\text{F}$
 - (C) $1.5\mu\text{F}$
 - (D) $36\mu\text{F}$
16. A wire of uniform cross-section has a resistance of $16\ \Omega$. It is melted and recast into a wire of half its original length. The new resistance is:
- (A) $4\ \Omega$
 - (B) $8\ \Omega$
 - (C) $32\ \Omega$
 - (D) $64\ \Omega$
17. The electrical conductivity of a solid metallic conductor primarily depends upon:
- (A) Its length and cross-sectional area
 - (B) The nature of the material and its temperature
 - (C) The magnitude of the applied voltage
 - (D) The direction of current flow
18. Two resistors of $10\ \Omega$ and $15\ \Omega$ are connected in parallel. This combination is placed in series with a $4\ \Omega$ resistor. The total effective resistance is:
- (A) $29\ \Omega$
 - (B) $10\ \Omega$
 - (C) $25\ \Omega$
 - (D) $6\ \Omega$
19. Identify the exact temperature value where the Celsius and Fahrenheit scales read identical numerical values.
- (A) 0°

- (B) -40°
(C) 40°
(D) -273°
20. Heat capacity per unit mass of a defined substance is scientifically termed:
(A) Thermal conductivity
(B) Specific heat
(C) Latent heat
(D) Molar heat capacity
21. In the SI system, what is the standard unit for the coefficient of thermal conductivity?
(A) $\text{W} \cdot \text{m}^{-1} \cdot \text{K}^{-1}$
(B) $\text{J} \cdot \text{m} \cdot \text{K}^{-1}$
(C) $\text{W} \cdot \text{m}^2 \cdot \text{K}^{-1}$
(D) J/K
22. The mode of thermal energy transfer responsible for solar heat reaching the Earth's surface through a vacuum is:
(A) Conduction
(B) Natural Convection
(C) Radiation
(D) Forced Convection
23. The mechanical equivalent of heat establishes that 1 kilocalorie (Kcal) is approximately equivalent to:
(A) 4.186 Joules
(B) 41.86 Joules
(C) 418.6 Joules
(D) 4186 Joules
24. If a metallic rod has a coefficient of linear expansion denoted by α , its coefficient of superficial (area) expansion is:
(A) $\alpha/2$
(B) 2α
(C) 3α
(D) α^2
25. The fundamental nature of sound waves propagating through a gaseous medium is:
(A) Transverse mechanical
(B) Longitudinal mechanical
(C) Transverse electromagnetic
(D) Non-mechanical stationary

26. The functionality of optical fibers in long-distance communication systems is based exclusively on the principle of:
- (A) Wave diffraction
 - (B) Chromatic dispersion
 - (C) Total internal reflection
 - (D) Light polarization
27. Calculate the critical angle for a transparent optical medium possessing an absolute refractive index of 2.
- (A) 30°
 - (B) 45°
 - (C) 60°
 - (D) 90°
28. The acronym LASER is strictly defined as Light Amplification by Stimulated Emission of:
- (A) Resonance
 - (B) Reflection
 - (C) Radiation
 - (D) Radiance
29. According to Sabine's reverberation formula, the time of reverberation in an auditorium is inversely proportional to:
- (A) The volume of the auditorium
 - (B) The total surface area of the walls
 - (C) The total sound absorption
 - (D) The frequency of the emitted sound
30. A continuous wave possesses a frequency of 100 Hz and a wavelength of 2.5 meters. The phase velocity of the wave is:
- (A) 40 m/s
 - (B) 100 m/s
 - (C) 250 m/s
 - (D) 500 m/s
31. The chemical reaction represented by
- $$Na_2SO_4(aq) + BaCl_2(aq) \rightarrow BaSO_4(s) + 2NaCl(aq)$$
- is classified as a:
- (A) Combination reaction
 - (B) Decomposition reaction
 - (C) Single displacement reaction
 - (D) Double displacement precipitation reaction
32. When the chemical equation $Al + HCl \rightarrow AlCl_3 + H_2$ is fully balanced using integer coefficients, the coefficient for HCl is:
- (A) 2
 - (B) 3

- (C) 4
(D) 6
33. During the metallurgical burning of coal in the presence of atmospheric oxygen, the primary process occurring is a:
(A) Displacement reaction
(B) Combination reaction
(C) Double displacement reaction
(D) Thermal decomposition
34. The aqueous solution of Sodium Carbonate (Na_2CO_3) exhibits a pH value that is:
(A) Exactly 7.0
(B) Less than 7.0
(C) Greater than 7.0
(D) Exactly 0.0
35. When a standard metallic oxide reacts completely with a dilute acid, the resulting products are:
(A) A base and water
(B) A salt and hydrogen gas
(C) A salt and water
(D) A non-metal and oxygen
36. The chemical compound extensively utilized as an antacid, commonly known as "Milk of Magnesia," is:
(A) $MgCl_2$
(B) $Mg(OH)_2$
(C) $MgSO_4$
(D) $MgCO_3$
37. The commercial manufacturing of bleaching powder involves the reaction of chlorine gas with:
(A) Calcium carbonate
(B) Quick lime
(C) Dry slaked lime
(D) Calcium chloride
38. Based on the standard reactivity series, which of the following descending order sequences is correct?
(A) $Mg > Al > Zn > Fe$
(B) $Al > Mg > Fe > Zn$
(C) $Fe > Zn > Al > Mg$
(D) $Mg > Fe > Zn > Al$

39. The number of valence electrons present in the outermost shell of a stable fluorine atom is:
- (A) 2
 - (B) 5
 - (C) 7
 - (D) 9
40. Which of the following is the most effective metallurgical method to prevent the rusting of an iron frying pan subjected to heat?
- (A) Applying a thick layer of grease
 - (B) Applying standard paint
 - (C) Applying a protective coating of zinc
 - (D) Submerging in distilled water
41. In the fundamental architecture of a computer, the CPU is comprised primarily of:
- (A) RAM and ROM
 - (B) Hard Drive and Motherboard
 - (C) Arithmetic Logic Unit (ALU) and Control Unit (CU)
 - (D) Input Devices and Output Peripherals
42. Which of the following data types is strictly considered invalid within the architecture of MS-Excel?
- (A) Number
 - (B) Date/Time
 - (C) Label
 - (D) Character
43. Within standard HTML formatting, which tag is correctly utilized to establish a relative hyperlinked anchor?
- (A) <link href="page.html">
 - (B)
 - (C) <hyper link="url">
 - (D) <url href="link.html">
44. What is the absolute maximum zoom percentage allowed in a standard Microsoft PowerPoint presentation interface?
- (A) 100%
 - (B) 200%
 - (C) 300%
 - (D) 400%
45. The smallest indivisible unit of digital data processing in a computer system is the:
- (A) Byte
 - (B) Nibble
 - (C) Bit
 - (D) Pixel
46. The fatal condition in infants commonly referred to as "Blue Baby Syndrome" is directly linked to the ingestion of water polluted with:
- (A) Heavy metal Mercury

- (B) Arsenic compounds
 - (C) Nitrates
 - (D) Lead particulates
47. The core objective of the Paris Agreement is to limit the increase in global average temperature to well below:
- (A) 1.0°C
 - (B) 1.5°C
 - (C) 2.0°C
 - (D) 2.5°C
48. The current approximate efficiency range for modern commercial solar photovoltaic (PV) panels converting sunlight to electricity is:
- (A) 5% to 10%
 - (B) 15% to 20%
 - (C) 35% to 40%
 - (D) 50% to 60%
49. Chlorofluorocarbons (CFCs) are strictly banned in refrigerants primarily because they cause:
- (A) Severe localized thermal inversions
 - (B) The rapid depletion of the ozone layer
 - (C) The immediate contamination of groundwater
 - (D) Acidification of the lower troposphere
50. The generation of commercial power by extracting heat trapped deep within the Earth's crust is formally classified as:
- (A) Tidal energy
 - (B) Hydrothermal energy
 - (C) Geothermal energy
 - (D) Biomass thermal energy

SECTION 2: Aptitude Test (Mathematics + Soft Skills)

51. Let A and B be two non-singular square matrices of order n . The transpose of their product, denoted as $(AB)^T$, is mathematically equal to:
- (A) $A^T B^T$
 - (B) $B^T A^T$
 - (C) $(BA)^T$
 - (D) AB^T

52. Given the 2×2 matrix $A = \begin{bmatrix} 2 & -1 \\ 3 & 1 \end{bmatrix}$, the inverse matrix A^{-1} evaluates precisely to:

(A) $\frac{1}{5} \begin{bmatrix} 1 & 1 \\ -3 & 2 \end{bmatrix}$

(B) $\frac{1}{5} \begin{bmatrix} 1 & -1 \\ 3 & 2 \end{bmatrix}$

(C) $\frac{1}{5} \begin{bmatrix} -1 & 1 \\ 3 & -2 \end{bmatrix}$

(D) $\frac{1}{5} \begin{bmatrix} 2 & 1 \\ -3 & 1 \end{bmatrix}$

53. If matrix $A = \begin{bmatrix} 1 & 2 & 1 \\ 2 & 1 & 3 \\ 1 & 1 & 0 \end{bmatrix}$, the value of the determinant $|A|$ is:

(A) -3

(B) 3

(C) -4

(D) 4

54. If a matrix A satisfies the condition $|A| = 0$, the matrix is strictly defined algebraically as a:

(A) Scalar matrix

(B) Singular matrix

(C) Non-singular matrix

(D) Identity matrix

55. The principal value of $\sin(225^\circ)$, evaluated via standard allied angle formulas, is:

(A) $\frac{1}{\sqrt{2}}$

(B) $-\frac{1}{\sqrt{2}}$

(C) $\frac{\sqrt{3}}{2}$

(D) $-\frac{\sqrt{3}}{2}$

56. If $\tan \theta = -\frac{12}{5}$ and θ is located such that $\frac{3\pi}{2} < \theta < 2\pi$, the exact value of $\cos \theta$ is:

(A) $\frac{12}{13}$

- (B) $-\frac{12}{13}$
- (C) $\frac{5}{13}$
- (D) $-\frac{5}{13}$

57. The principal value branch evaluation of $\cos^{-1}\left(-\frac{\sqrt{3}}{2}\right)$ is:

- (A) $\frac{2\pi}{3}$
- (B) $-\frac{\pi}{6}$
- (C) $\frac{5\pi}{6}$
- (D) $\frac{7\pi}{6}$

58. Two non-zero vectors $\mathbf{a}$ and $\mathbf{b}$ are mathematically defined as perpendicular to one another if their scalar product evaluates to:

- (A) 1
- (B) -1
- (C) 0
- (D) $|\mathbf{a}||\mathbf{b}|$

59. If the defined vectors $(2, 3, a)$ and $(3, -1, 4)$ are mutually perpendicular, the strict value of the scalar a must be:

- (A) $\frac{3}{4}$
- (B) $-\frac{3}{4}$
- (C) $\frac{4}{3}$
- (D) $-\frac{4}{3}$

60. The exact coordinates of the center of the circle given by the equation

$$x^2 + y^2 + 6x - 8y - 11 = 0$$

are:

- (A) $(3, -4)$
- (B) $(-3, 4)$
- (C) $(6, -8)$
- (D) $(-6, 8)$

61. The general equation of a straight line passing through the specific coordinates $(1, -1)$ and $(-1, 1)$ is derived as:

(A) $2x + y - 1 = 0$

(B) $x + 2y - 1 = 0$

(C) $x + y = 0$

(D) $x - y = 0$

62. The evaluation of the standard limit $\lim_{x \rightarrow 0} \frac{10^x - 5^x}{x}$ using logarithmic expansion results in:

(A) $\log_e(5)$

(B) $\log_e(10)$

(C) $\log_e(2)$

(D) $\log_e(50)$

63. The evaluation of the limit at infinity, $\lim_{n \rightarrow \infty} \left(1 + \frac{5}{2n}\right)^{8n}$, converges to:

(A) e^{10}

(B) e^{20}

(C) e^{13}

(D) e^4

64. By applying the derivative of a composite function, $\frac{d}{dx} [\log(\sin x)]$ evaluates to:

(A) $\tan x$

(B) $\cot x$

(C) $-\tan x$

(D) $-\cot x$

65. If the implicit function equation is $x + y = -2$, the first derivative $\frac{dy}{dx}$ is:

(A) 0

(B) 1

(C) 2

(D) -1

66. The necessary and sufficient mathematical condition for a function $f(x)$ to attain a local minimum at a critical point $x = a$ is:

(A) $f''(a) < 0$

(B) $f''(a) > 0$

(C) $f'(a) > 0$

(D) $f'(a) < 0$

67. Using the chain rule, the first derivative $\frac{d}{dx}(\cos^2 x)$ evaluates precisely to:

(A) $\sin 2x$

(B) $-\sin 2x$

(C) $\cos 2x$

(D) $-\cos 2x$

68. The integration of the inverse exponential, $\int \frac{1}{e^x} dx$, yields the result:

(A) $e^{-x} + C$

(B) $e^x + C$

(C) $-e^{-x} + C$

(D) $-e^x + C$

69. Evaluating the indefinite integral $\int \cos(10x - 17) dx$ yields:

(A) $10 \sin(10x - 17) + C$

(B) $-10 \sin(10x - 17) + C$

(C) $\frac{1}{10} \sin(10x - 17) + C$

(D) $-\frac{1}{10} \sin(10x - 17) + C$

70. By applying the standard form $\int e^x [f(x) + f'(x)] dx$, the integral

$\int e^x (\operatorname{cosec}^2 x - \cot x) dx$ is evaluated as:

(A) $e^x \operatorname{cosec}^2 x + C$

(B) $-e^x \operatorname{cosec}^2 x + C$

(C) $-e^x \cot x + C$

(D) $e^x \cot x + C$

71. Using the properties of odd and even functions, the definite integral

$\int_{-1}^1 \sin^5 x \cdot \cos^8 x dx$ evaluates strictly to:

- (A) 1
 (B) $\frac{1}{2}$
 (C) -1
 (D) 0
72. Applying the fundamental laws of logarithms, the simplification of the expression $\log 2 + 2 \log 3$ is:
- (A) $\log 6$
 (B) $\log 8$
 (C) $\log 12$
 (D) $\log 18$
73. The base change evaluation for the specific expression $\log_{1/81} \left(\frac{1}{9}\right)$ results in:
- (A) 2
 (B) $\frac{1}{2}$
 (C) 9
 (D) $-\frac{1}{2}$
74. Using logarithmic exponentiation properties, the numerical value of the expression $4^{\log_2 3} + 2^{\log_8 27}$ is:
- (A) 9
 (B) 10
 (C) 11
 (D) 12
75. If the arithmetic mean of the specific data set containing the observations 19, 15, 12, k , 8, and 3 is calculated to be 11, the integer value of k must be:
- (A) 8
 (B) 9
 (C) 10
 (D) 11

(Questions 76–80 are based on the following passage)

"The science of fireworks is technically termed 'pyrotechnics', derived from the Greek word 'pyr' meaning fire and 'technics' meaning an art. Pyrotechnics encompasses not only visual fireworks but a broad spectrum of devices employing parallel materials and exothermic principles, ranging from everyday safety matches to the solid fuel rocket boosters utilized in space shuttles. The household safety match is classified as a specialized pyrotechnic device, as all defining pyrotechnic effects—heat, smoke, light, gas, and sound—are actively present during its ignition.

Historical consensus suggests that 'black powder', the fundamental chemical compound utilized in pyrotechnics, was initially developed in China over a millennium ago. It required nearly two thousand years for this specific metallurgical knowledge to propagate to the West. In 1242, the English monk Roger Bacon finally documented the precise chemical formula for black powder. Due to its highly volatile and dangerous nature, Bacon deliberately transcribed the formula utilizing a complex cryptographic code language."

76. According to the provided passage, the foundational chemical material utilized universally in fireworks is identified as:
- (A) Solid fuel
 - (B) Pyrotechnic gas
 - (C) Black powder
 - (D) Exothermic match fuel
77. Based on the passage, the English monk Roger Bacon transcribed the black powder formula in a cryptographic code primarily because:
- (A) He lacked the Greek vocabulary to write it plainly
 - (B) He considered the substance exceptionally dangerous
 - (C) He was instructed to do so by the Chinese pioneers
 - (D) He wanted to protect his intellectual property rights
78. Which of the following devices is explicitly categorized by the author as a specialized pyrotechnic device?
- (A) The solid fuel rocket booster
 - (B) The household safety match
 - (C) The space shuttle engine
 - (D) The everyday gas stove
79. The etymology of the term "pyrotechnics" is correctly traced back to:
- (A) The Chinese language
 - (B) The English language
 - (C) The Greek language
 - (D) The Latin language
80. According to historical consensus noted in the text, the original development of black powder is attributed to:
- (A) Roger Bacon in 1242
 - (B) Greek philosophers
 - (C) Pioneers in China
 - (D) Western military scientists
81. Within the academic study of communication theory, the specific discipline that analyzes body language, facial expressions, and physical gestures is termed:
- (A) Proxemics
 - (B) Chronemics
 - (C) Paralanguage
 - (D) Kinesics
82. During the dynamic process of interpersonal communication, the specific act of the

receiver comprehending and extracting the original intent of the message is called:

- (A) Encoding
- (B) Transmitting
- (C) Decoding
- (D) Feedback

83. Which of the following examples definitively falls outside the classification of verbal communication?
- (A) A project manager orally assigning tasks
 - (B) A candidate drafting a formal email
 - (C) A supervisor nodding to indicate approval
 - (D) An engineer reading an instruction manual aloud
84. Internal psychological variables such as severe anxiety, emotional distress, or sudden fear generate which specific type of communication hindrance?
- (A) Semantic Barrier
 - (B) Psychological Barrier
 - (C) Physical Barrier
 - (D) Cultural Barrier
85. A formal business "Letter of Adjustment" is strictly drafted and dispatched in direct response to a:
- (A) Letter of Inquiry
 - (B) Letter of Order
 - (C) Letter of Quotation
 - (D) Letter of Complaint
86. In the structural formatting of a standard business letter, the recipient's name, title, and geographic destination are collectively referred to as the:
- (A) Return Address
 - (B) Inside Address
 - (C) Salutation
 - (D) Attention Line
87. Which component of a formal business letter is explicitly designed to execute a polite and professional leave-taking?
- (A) Salutation
 - (B) Subject Line
 - (C) Complimentary Close
 - (D) Enclosure Notation
88. The standard abbreviation "C.O.D." extensively utilized in commercial order letters formally stands for:
- (A) Cash on Delay
 - (B) Cash on Delivery
 - (C) Credit on Demand
 - (D) Cost of Dispatch
89. In written professional correspondence, the Latin-derived abbreviation "P.S." placed at the document's conclusion represents:

- (A) Post Script
 - (B) Personnel Service
 - (C) Primary Statement
 - (D) Post Signature
90. Select the correct spelling for the term defining an individual who successfully organizes and assumes the risk of a commercial business venture:
- (A) Enterpeneur
 - (B) Entrepreneur
 - (C) Entreprenur
 - (D) Enterpreneur
91. Identify the specific grammatical interjection utilized within the following sentence:
"Hurrah! The engineering team has successfully passed the final stress test."
- (A) Passed
 - (B) Successfully
 - (C) Hurrah!
 - (D) Engineering
92. Select the sentence that demonstrates the correct and formal application of subject-verb agreement rules:
- (A) The captain, along with the ten players, have arrived at the stadium.
 - (B) The captain, along with the ten players, are arrived at the stadium.
 - (C) The captain, along with the ten players, has arrived at the stadium.
 - (D) The captain, along with the ten players, were arriving at the stadium.
93. Choose the option that applies the correct preposition of vertical spatial relationship to the sentence: "The newly installed security camera is positioned exactly _____ the main entrance."
- (A) over
 - (B) across
 - (C) above
 - (D) into
94. Identify the most grammatically accurate and parallel sentence structure from the options below:
- (A) People were coming, going, and ignorant him.
 - (B) People were coming, going, and ignoring him.
 - (C) People where coming, going, and ignoring him.
 - (D) People were coming, going, and ignored him.
95. Which of the following sentences correctly deploys the present perfect continuous tense to describe an ongoing action?
- (A) Shreya is tired as she had worked since 7 o'clock.
 - (B) Shreya was tired as she worked since 7 o'clock.
 - (C) Shreya is tired as she has been working since 7 o'clock.
 - (D) Shreya is tired as she working since 7 o'clock.
96. Identify the correct formal spelling for the standard unit of temperature predominantly utilized in the United States:

- (A) Fahrenhit
 - (B) Fahrenheit
 - (C) Ferrenhit
 - (D) Fahrenheat
97. Select the grammatically correct passive voice conversion for the sentence: "The authorities arrested the cyber criminals."
- (A) The cyber criminals are arrested the authorities.
 - (B) The cyber criminals were arrested by the authorities.
 - (C) The authorities were arrested by the cyber criminals.
 - (D) The cyber criminals had arrested by authorities.
98. Choose the correct application of quantitative adjectives in the interrogative sentence: "Do you have _____ remaining doubt regarding this specific architectural blueprint?"
- (A) some
 - (B) many
 - (C) any
 - (D) much
99. Identify the sentence that correctly manages collective nouns and subsequent verb agreement following a catastrophic event:
- (A) The ship was wrecked, and every man, woman, and child have drowned.
 - (B) The ship was wrecked, and every man, woman, and child are drowned.
 - (C) The ship was wrecked, and every man, woman, and child was drowned.
 - (D) The ship was wrecked, and every man, woman, and child were drowned.
100. Select the correct spelling for the formal term denoting a lack of ease or added difficulty:
- (A) Inconvinience
 - (B) Inconveninse
 - (C) Inconvenience
 - (D) Inconviniance
